What is Melbourne Open Data Project (MOP)

The City of Melbourne initiated MOP with Dakin to support the user of their open Data by business, researchers and software developers. Open Data is a component of their smart cities' strategy. Our project aims to develop an educational platform that utilises the City of Melbourne's Open Data to showcase the practical applications of Open Data to cater to the needs of various stakeholders such as industry professionals, government entities and academic researchers. Our long-term goal is to use Data to facilitate innovation and informed solutions to contemporary challenges across the City of Melbourne council area.

It is a wonderful platform to learn about Melbourne. I liked them. Thank you!

I found the data very reliable and informative. It helped me a lot for research purpose.

As a student, these data saved my time for research for case study. Much appreciated!
